PROFILE SUMMARY

Need a full-stack web application, an AI-powered MVP, a gamified web experience, or custom Apify web scrapers built at incredible speed? I specialize in building and deploying complete full-stack web applications and autonomous data workflows using AI-native product engineering. By combining modern frameworks (Next.js, Supabase) with multimodal AI APIs (FaLai, ElevenLabs) and autonomous scraping (Apify), I deliver production software in days rather than months.

WHAT I DELIVER FOR CLIENTS

- ### 1 RAPID MVP & PRODUCTION WEB DEVELOPMENT

 - Modern frontends built with Next.js (App Router 15/16) and React 19 with sleek Tailwind CSS styling.
 - Robust backends on Supabase: PostgreSQL database schema, Row-Level Security (RLS), edge auth, and Drizzle ORM.
 - Payment gateways: Multi-currency checkout, integrations with Paystack (ZAR) and PayPal (USD) (or other Payment Services)
- ### 2 AI VIDEO, VOICE & TOOLING INTEGRATION

 - Multimodal generative pipelines: Text-to-video (FAL.ai), voice synthesis (ElevenLabs), and LLM orchestration (OpenRouter).
 - Interactive developer tools and wizards with deterministic code/config export (ZIP/File generation).
- ### 3 GAMIFIED & AUTONOMOUS WEB APPLICATIONS

 - Real-time multiplayer apps, trivia games, and dice/node RPG engines using Supabase Realtime and Zustand.
 - Dynamic multi-age experiences, voting mechanics, and audio-reactive web interfaces.
- ### 4 WEB SCRAPING & AUTONOMOUS APIFY ACTORS

 - Custom Apify actors built for high-scale web crawling, SERP scraping, and structured JSON/CSV pipelines.
 - Autonomous deep-research agents integrating search engines, web extractors, and LLM synthesis.

★ PROVEN PORTFOLIO HIGHLIGHTS

- > **Aytada.app**: AI video ad generator combining scriptwriting, video generation (FAL.ai), voiceover (ElevenLabs), and multi-currency billing.
- > **Visita.co.za**: AI Civic Platform for South Africa that provides GeoSpatial Ward Services and Political information (Cursor, Claude Code, Gemini).
- > **CleanandClean.co.za** : A community-driven platform designed to mobilize and scale grassroots environmental cleanup initiatives across South Africa.
- > **Schooler.co.za**: Educational platform designed for high performance and clean usability.
- > **Game Portfolio**: “Mzansi Midnight” (Noir RPG), “Decolonize” (Economic strategy game), “Would You Rather” (Interactive party app), and “Toll Plaza” (Realtime multiplayer trivia).
- > **35+ Apify Actors**: Deep research agents, brand monitors, and industry intelligence scrapers.

WHY WORK WITH ME

- ✓ Extreme velocity without compromising architectural cleanliness or design quality.
- ✓ Clear, transparent communication and daily deployment milestones.
- ✓ Complete end-to-end ownership: schema design, API integrations, UX design, and deployment.
